

**ABSTRACT OF THE DISCLOSURE**

5           A frame joiner press system for efficiently driving a V-nail into two adjacent members of a picture frame. The frame joiner press system includes a base, a plurality of support shafts extending upwardly from the base, a support platform slidably positioned upon the support shafts, a plurality of retaining pins movably positioned within a support housing attached to the base, and a leverage structure for applying a  
10       downward force upon a pair of frame members. The retaining pins receive one or more V-nails and are springably positioned within the support housing. When the frame members are pressed upon the V-nails, the retaining pins are depressed into the support housing.
